information**

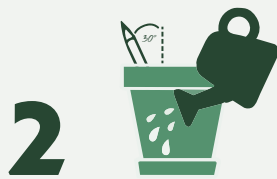

Plant guide

Use a pot with a drainage hole at the bottom. Place it on a saucer and fill it with moist potting soil.

Plant it at a 30° angle so that the soil only covers the seed capsule.

Add water to the saucer frequently.
In 1-4 weeks, new plants will sprout.

Seeds

Common name	Latin name	Germination time	Difficulty	Climate	Growing tips
-------------	------------	------------------	------------	---------	--------------

Herbs

Basil	 <i>Ocimum basilicum</i>	6-10 days	Easy	Temperate, subtropical and tropical	Sow indoors all year round. After frost, it can also be moved to a greenhouse.
--------------	-----------------------------------------------------------------------------------------------------------	-----------	------	-------------------------------------	--------------------------------------------------------------------------------
